Your My Bizerba Offer X-Ray machine

Dear Sir or Madam,

We are pleased to offer you this My Bizerba solution, designed specifically for you.

Founded in 1866, we are able to apply more than 150 years of experience to your specific needs. Bizerba is world-renowned for its global presence, and for providing an expansive sales, service, and support network with an unmatched ability to facilitate an agile, customer-oriented operation.

As an experienced partner with outstanding technical know-how, we can offer you a comprehensive range of services tailored to your individual requirements, around the clock, 365 days a year.

Being open-minded and thinking in terms of possibilities rather than limits is a tradition at Bizerba. With this we have redefined our performance. Discover the perfect balance of individuality, quality and cost-effectiveness with My Bizerba.

We are pleased to have prepared a solution offer consisting of the products listed below and relevant service contract offerings. Our offer is based on many years of experience, combined with a quality assurance system certified according to DIN EN ISO 9001.

Best Regards,

Brock Sanquist

Pos	Material	Qty.	Unit Price	Discount	Net Price
1	5200000SXRF6080001 X-Ray system XR-6080 Including Pusher Rejector with Locking Bin	1 Piece	\$ 122,175.00		\$ 122,175.00

- Safe detection of metallic and non-metallic foreign objects
- Includes automatic rejector to remove contaminated/out-of-spec products from line
- Reliable detection of missing, broken or misshaped products
- Weight control of products or product components
- Synchronous inspection of up to six parallel running production lines
- Easy and intuitive operation
- Conform with BRC, M&S, IFS and HACCP
- Easy care and cleaning due to compact design and tool-free belt removal

Inspection system XR-6080 detects foreign objects based on density differences as compared to the product to be inspected. The different absorption of X-rays allows to detect contaminations. Besides metal, glass, ceramics, stones and raw bones the system also detects PVC, Teflon, rubber and glass fiber reinforced plastics. Even in aluminum-packaged products the XR-6080 finds non-magnetic stainless steels and non-ferrous metals. The system reliably checks completeness of closed packagings and can thereby optionally hide elements such as aluminum clips. An additional advantage: The device detects product defects such as cracks or air pockets in tubes and tins.

Transport direction	Left to right
Tunnel dimensions (WxH)	600x300 mm
X-ray voltage	80 kV
X-ray power	350W
Operating instructions	English
Menu language	English
Operator display	17" Colour touch screen
Transport height	800 +/- 100 mm
Device cooling	Industrial air conditioner
Ejection system	Pusher, drop-out, & retractor available
Belt speed	10-60 m/min
Belt dimensions (WxL)	600x2250 mm
Material design	Stainless Steel 1.4301
Interfaces	Ethernet TCP/IP
Power supply	100-220 V, 50/60 Hz
Protection type	IP65
Rejector Type	Pusher w/ locking bin
X-Ray System Length	1445 mm
Rejector System Length	805 mm
Total System Length	2250 mm

2	52400026TSTCRDMSS1	1 Piece	\$ 147.60	\$ 147.60
	Certified Test Card - Multicard 316 SS			

SUB-TOTAL \$ 127,322.60
